

Project

Computing and Mathematics

May, 2026

Short Title:	Project	
Faculty	Science and Computing	
Department	Computing and Mathematics	
Cluster	Professional Skills	
Author	RBIRNEY	
Credits	10	Level: Intermediate

Description of Module / Aims

The aim of this module is for students to synthesise, deepen and develop their knowledge of their specialist area by developing, implement, testing and reflecting upon a development project based on a current industry issues, trends and developments related to the programme specialisation.

Programmes

PROJ -0149	Diploma in Computing with Security and Forensics (WD_BCSEC_SP)	3 / 2 / M
------------	--	-----------

Indicative Content

- Design, implement, and test a solution to a development proposal in Security and Forensics
- Create appropriate technical documentation of work carried out including a critical reflection on choices made and results achieved
- A typical project would require the student to, for example, carry out an in-depth comparison of the application of two or more tool suites to a particular situation. This would include configuration and customisation of the tool. Depending on the particular project and application, there could be scope to deploy security/forensics logic by developing custom rules or using an API

Learning Outcomes

On successful completion of this module, a student will be able to:

1. Research and analyse current industry issues, trends and developments related to security and forensics.
2. Develop, negotiate, communicate and agree an appropriate project proposal.
3. Design, implement a project plan to develop a solution.
4. Test the solution developed and critically reflect on the implementation undertaken and its outcomes.
5. Appraise the conduct of the project and its outcomes.

Learning and Teaching Methods

- Students will be assigned an academic supervisor for their project with whom they will have regular project meetings, typically for 30 minutes per week.
- The project will be largely self-directed; the student will be encouraged to research the topic to develop solutions for problems they encounter.

Assessment Methods

	Weighing	Outcomes Assessed
Continuous Assessment	100%	1,2,3,4,5
Project	100%	1,2,3,4,5

Assessment Criteria

- <40%:** Failure to demonstrate ability to understand, scope or document a problem. Level of problem chosen for project considered too trivial.
- 40%-49%:** Demonstrates ability to understand scope and document problem. Ability to justify the choice of problem. Ability to present material in a clear manner.
- 50%-59%:** As above and ability to break down problem into appropriate packages. Comprehensive knowledge of area of problem. Ability to evaluate risks in mature and reflective manner. Planning is reasonable. Scoping shows an ability to abstract and get a clear overview of project.
- 60%-69%:** As above and ability to critique works in area of project. Document is of professional standard. Planning shows a degree of reflection and maturity. Excellent presentation skills with demonstrable ability to explain complex problems in a clear manner.
- 70%-100%:** As above and produces an excellent document which clearly and precisely describes what needs to be done as part of the project. Demonstrates ability to abstract ideas and reflect on the process.

Learning Modes

Learning Mode	F/T Hours	P/T Hours
Tutorial	6	
Independent Learning	264
